Relevant Coursework

California State University: Long Beach

Long Beach, CA

Bachelor's of Science in Computer Science

August 2021-Fall 2025

- Intro to Prog & Problem Solving, Intro to Computer Engineering, Discrete Structure Computer Applications I & II, Digital Logic and Assembly Prog, Data Structures, Object Oriented Application Development, System Programming, Algorithms, Computer Architecture Organization, Concepts of CS Theory, Principles of Prog Languages, Intro to SWE, Systems Prog, Database Fundamentals, Quantum Computation, Comp Security Principles, Intro Networks & Dist Comput, Machine Learning, CS Senior Project I

Projects *(available on Github)*

Expense Manager App (academic) | React Native, Javascript, Firebase

March 2025-May 2025

- Collaborated in a team of 4 to develop a mobile app for tracking and sharing expenses among friends.
- Led technical decision-making on architecture and technology stack selection.
- Built full-stack features that enabled users to create, join, and manage shared expenses using Firebase as the backend.
- Implemented interconnected state logic between users, groups, and associated bills to ensure consistent real-time updates across shared expense data.
- Made design decisions through a structured process of user interviews, requirements gathering, and testing multiple design prototypes.

Mobile Journal App (personal) | React Native, Javascript, Firebase

April 2025

- Developed a mobile journaling app to encourage daily reflection through personalized entries.
- Designed a responsive 3-column layout for browsing entries, inspired by Instagram's familiar interface.
- Enabled users to upload and attach images to journal entries to capture memorable moments.
- Integrated Firebase for cloud storage and real-time data syncing.

Portfolio Website (personal) | HTML, CSS, JS

May 2024

- Designed and developed a personal website to showcase projects and experience.
- Hosted the site using GitHub Pages under a custom domain.

Big Int (academic) | C++

May 2023

- Implemented a custom C++ class for performing arithmetic on arbitrarily large integers.
- Applied the class to compute the Collatz conjecture on user input.
- Utilized dynamic memory management and operator overloading.

Terminal Maze Game (academic) | Python

November 2022

- Built a terminal-based 2D maze game with dynamic gameplay and turn-based exploration.
- Designed mechanics for players to encounter monsters, potions, or empty cells while navigating unknown mazes.
- Applied design patterns (Factory, Singleton) to structure game logic and improve maintainability.

Skills

- **Programming Languages:** Python, C++, Java, JavaScript, C#, Haskell, Prolog, SQL, HTML, CSS
- **Database Technologies:** PostgreSQL, MongoDB, Firebase
- **Frameworks & Libraries:** React Native, NumPy, Pandas, Matplotlib, Scikit-learn, CustomTkinter, SQLAlchemy
- **Tools:** Node.js, WSL, GitHub, Expo Go, SSH, Neovim, VSCode, Figma
